

Simply more yield

That is what Engels Machines stands for. Our harvesting machines and systems are simple in application and use. Simple and efficient solutions for more calm in your business. That produce a higher return and more yield.

Engels Innovatietechnik BV is a production company that develops innovative products and systems for the modern agricultural entrepreneur. The family business was founded by Frank Engels. With his background in mechanical automation, Frank has a unique vision on established growing systems and harvesting processes in farming and horticulture.

In his search for alternative methods, he always strives for a high return. With knowledge gained in practice, new harvesting systems are developed for various crops. Here we make use of our robust construction methods, low-energy electrical drives and reliable energy supplies. With modern premises covering 5,000m², Engels Machines is able to manage multiple production

processes. In our efforts for better quality and efficiency, a shot blasting and powder coating process has been introduced alongside the robot welding. Under the trading name 'Engels Machines', Engels Innovatietechnik BV has been supplying the European market with quality harvesting technology since 1999. The AspergeSpin is a harvesting machine, without which modern asparagus growing would be inconceivable. With the introduction of the 'M-Arch' the AspergeSpin comes even more into its own. This innovative system adds a new dimension to foil management and makes the asparagus crop more controllable by giving the asparagus grower more grip on production, quality and labour costs.

1. The harvesting systems from Engels Machines, simple in use for more yield.

2. High-quality robot welding processes.

3. New building for Engels Machines.

4. Frame is powder-coated in our familiar blue.
